

*Перечень практических навыков по дисциплине «Нормальная физиология» для студентов 2 курса специальности (с включенным обучением на английском языке)*

1. Blood typing
2. Rhesus factor blood typing
3. Technology of taking blood from a man's finger
4. Methodic of RBC total count
5. Methodic of WBC total count
6. Methodic of WBC differential count (leukogram)
7. Methodic of hemoglobin total count
8. Erythrocyte sedimentation rate
9. Bleeding test
10. Blood coagulation test
11. Registration of electrocardiogram in a man
12. Analysis of electrocardiogram in a man
13. Analysis of heart sounds by auscultation
14. Measurement of arterial blood pressure in man with indirect methods
15. Arterial pulse test
16. Determination of Cardiac output (CarO)
17. Determination of vital capacity and lung volumes
18. Determination of the functional respiratory volume (MRV)
19. Calculation of the basal metabolism by different methods
20. Calculation of dietary balance
21. Determination of visual acuity
22. Determination of visual field
23. Determination of hearing acuity
24. Study of taste receptors (gustometry)
25. Study of deep reflexes (tendon jerks) in a man
26. Methodic to study conditioned reflexes
27. Dynamometry
28. Methods to study renal functions
29. Thermometry
30. Study of salivation
